PERSPECTIVE

The COVID-19 response illustrates that traditional academic reward structures and metrics do not reflect crucial contributions to modern science

Adam J. Kucharski *, Sebastian Funk , Rosalind M. Eggo 

PLOS Biology, 2020

The **Epiverse** initiative

Aim: change how analytics are used in the global infectious disease response, moving from inflexible analytical tools and ad-hoc collaboration to **integrated, generalisable and scalable community-driven software**.

What could the final size of an epidemic be?

What could the final size of an epidemic be?

$$\frac{dS}{dt} = -\beta SI$$

$$\frac{dI}{dt} = \beta SI - \gamma I$$

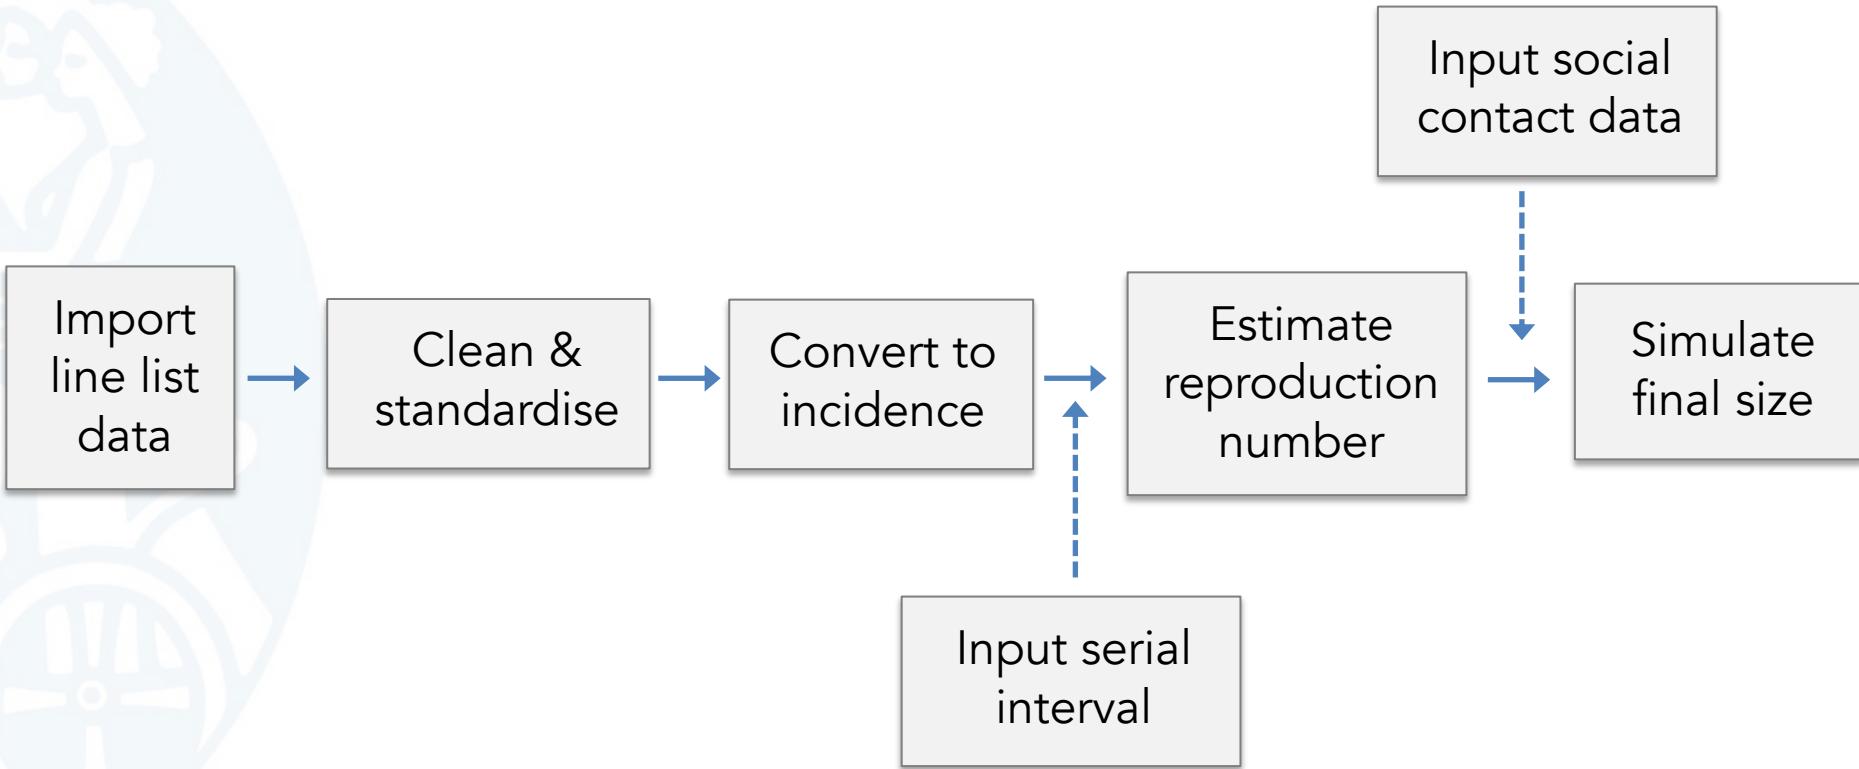

$$\frac{dR}{dt} = \gamma I$$

Bit of
algebra and
integration

Final size equation:

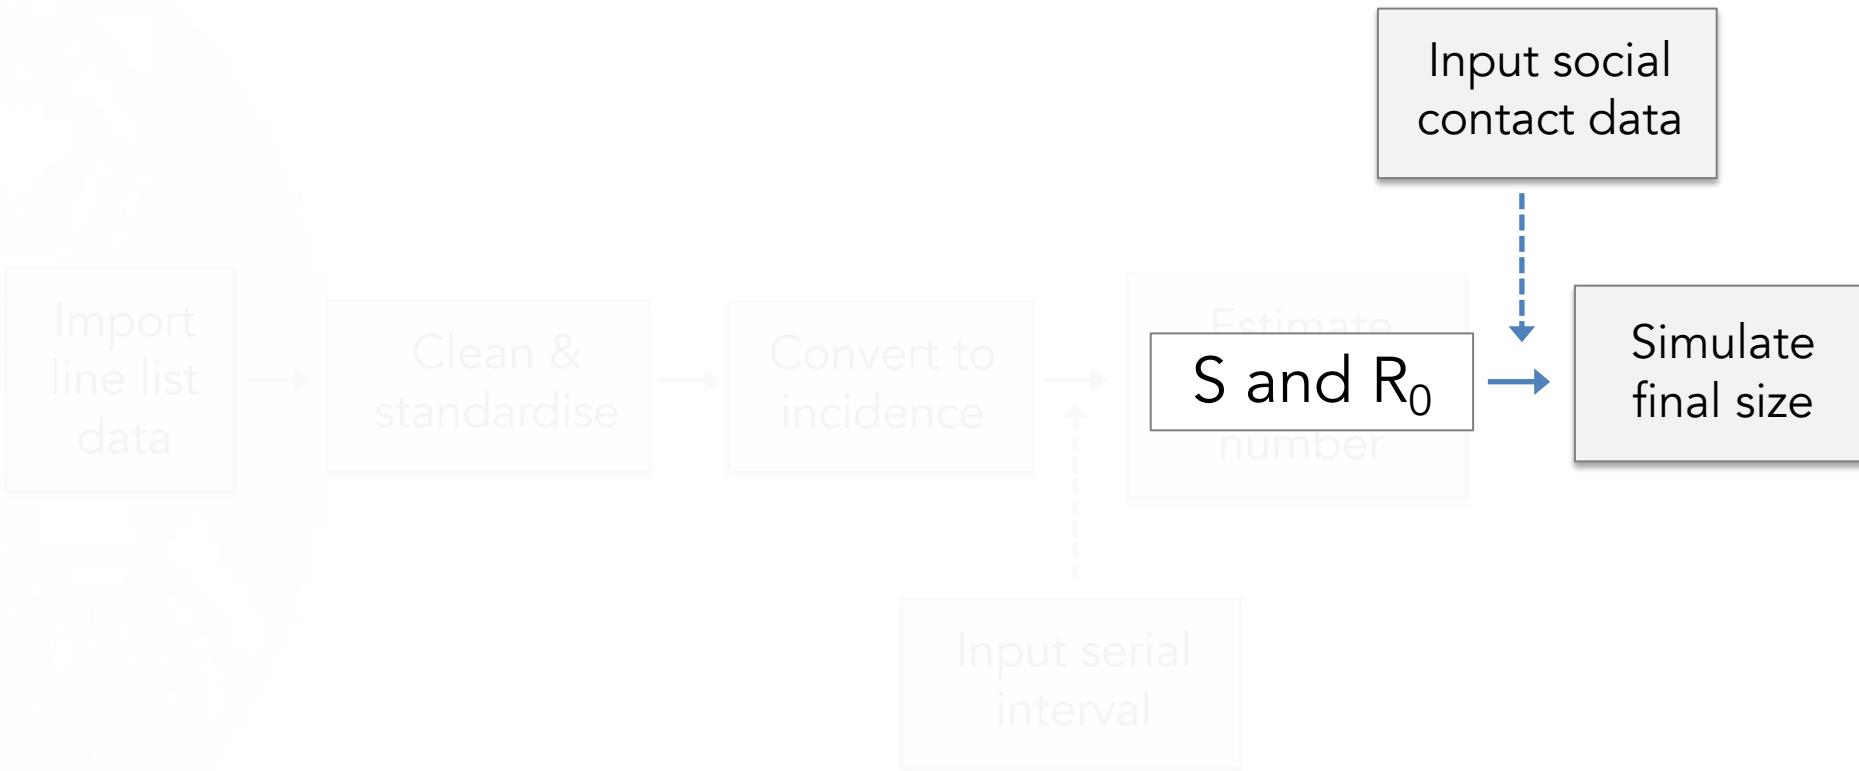

$$Z = 1 - e^{-R_0 Z}$$

Steps to get to final size

Steps to get to final size

socialmixr

Calculating final size

Follow best practice:

- Modularisation
- Automated tests
- Documentation

Work with Pratik
Gupte, Roz Eggo et al

Calculating final size

Follow best practice:

- Modularisation
- Automated tests
- Documentation

Load data and define model options:

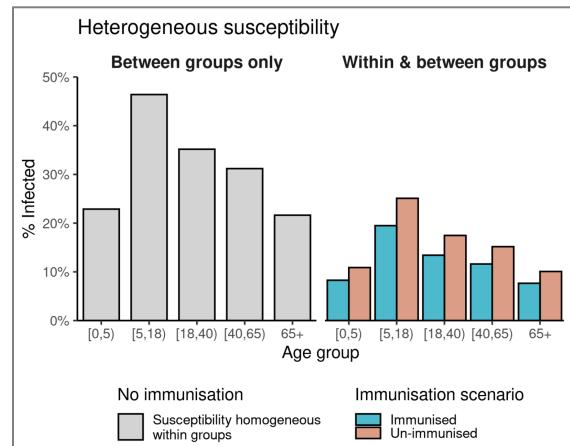

```
# get UK polymod data
polymod <- socialmixr::polymod
contact_data <- socialmixr::contact_matrix(
  polymod,
  countries = "United Kingdom",
  age.limits = c(0, 5, 18, 40, 65),
  symmetric = TRUE
)

# calculate final size
final_size_data <- final_size(
  r0 = r0,
  contact_matrix = contact_matrix,
  demography_vector = demography_vector,
  susceptibility = susc_uniform,
  p_susceptibility = p_susc_uniform
)
```

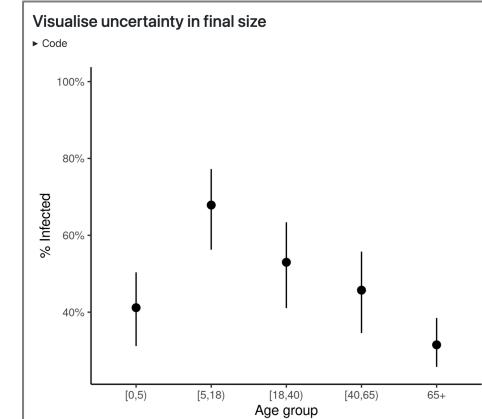

Work with Pratik
Gupte, Roz Eggo et al

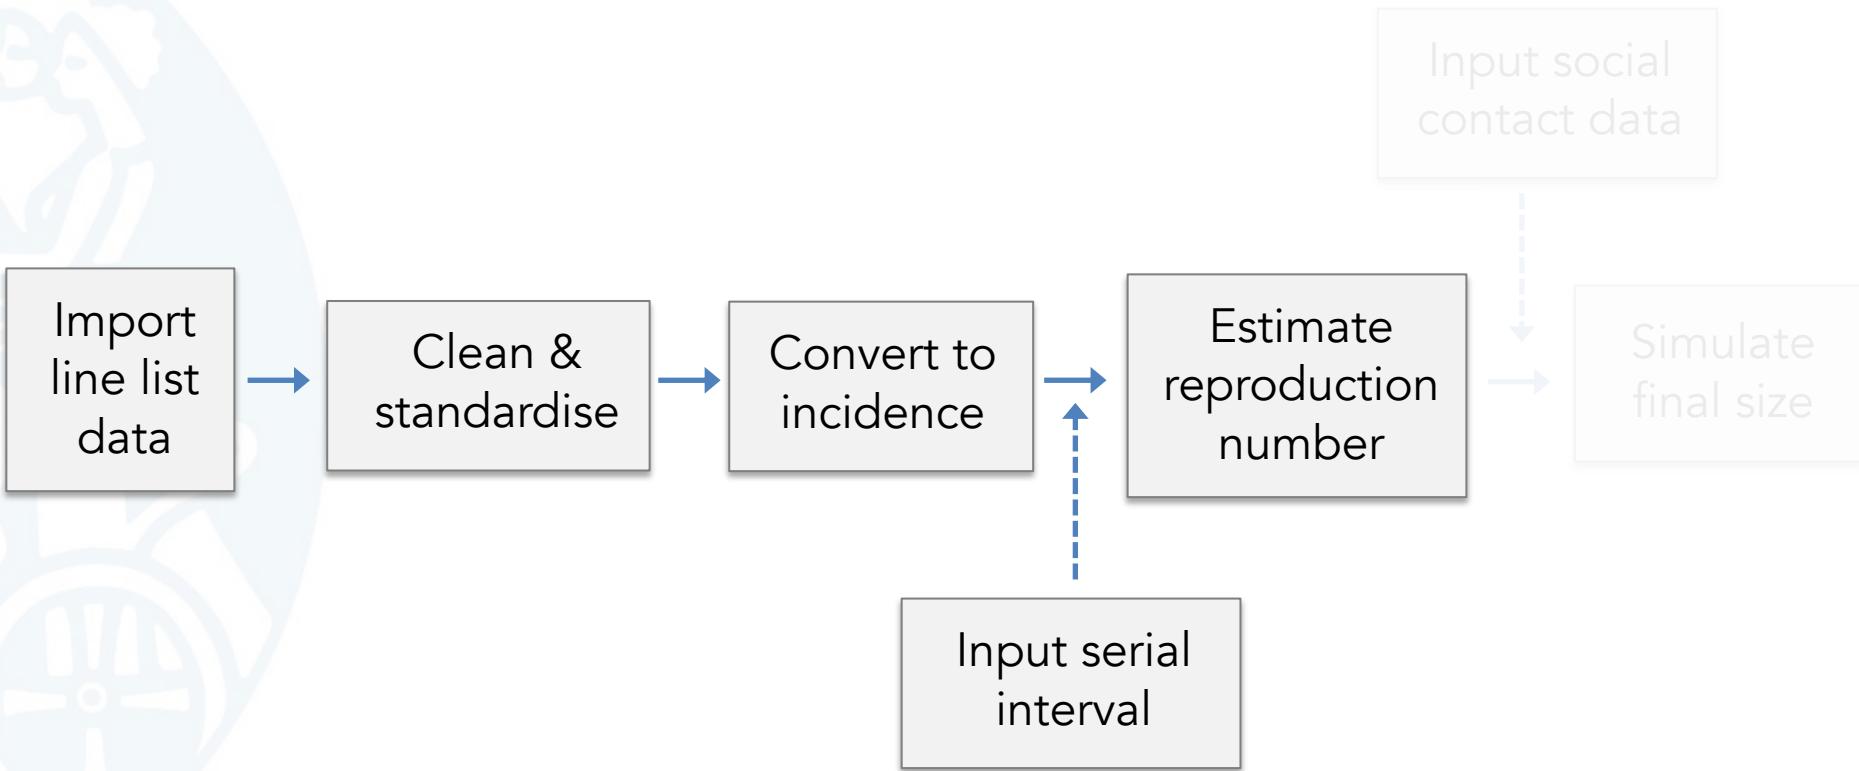

Calculate final size:

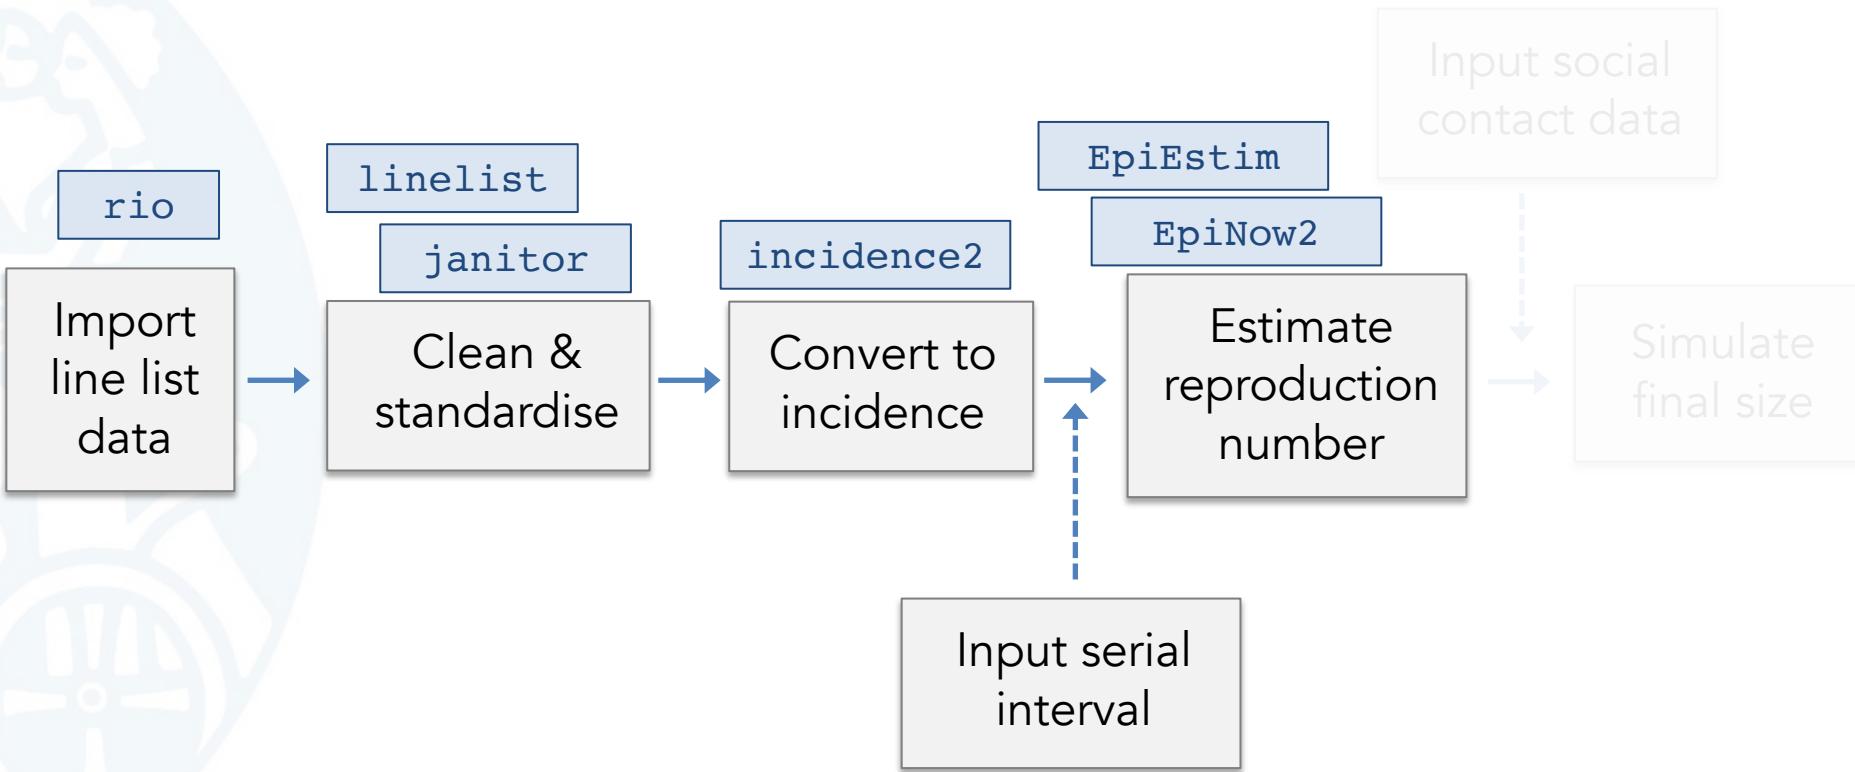

Propagate uncertainty:

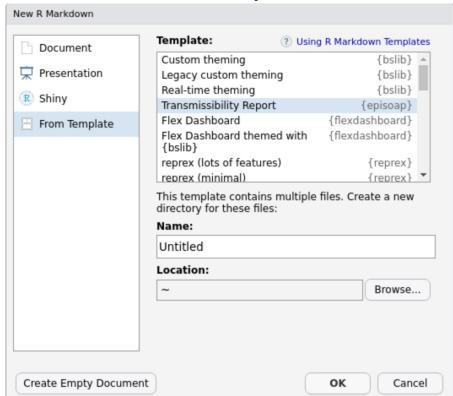

Estimating R or R_0

Estimating R or R_0

Choose template:

Outbreak analytics pipelines

Work by Hugo Gruson et al

Select options:

An integer or character indicating the (fixed) size of the time interval used for computing the incidence. Passed as the 'interval' argument in 'incidence2::incidence'.

week

Number of days to exclude from the estimation of Rt since data is likely to still be incomplete.

7

Number of days to include to get the latest observed value of Rt.

21

Should the serial interval distribution be extracted directly from the epiparameter package?

Name of the pathogen in the epiparameter database if `use_epiparameter = TRUE`.

SARS_Cov_2_wildtype

Mean of the distribution for serial interval if not using value from epiparameter. Ignored if `use_epiparameter = TRUE`.

4.2

Standard deviation of the distribution for serial interval if not using value from epiparameter. Ignored if `use_epiparameter = TRUE`.

4.9

Choice of probability distribution for serial interval if not using value from epiparameter. Ignored if `use_epiparameter = TRUE`.

gamma

Name of file containing the count data over time (default: `data:covid_hosp_uk_20201024.xlsx`)

Browse... No file selected

Which R package to use for Rt estimation

Importing parameters

“Fitting a log-normal distribution to the data, we estimated the mean serial interval of COVID-19 to be 4.9 days (95% CI: 4.4–5.7 days)”

Extract, store and reuse epidemiological parameters

Extract distributions from summary statistics:

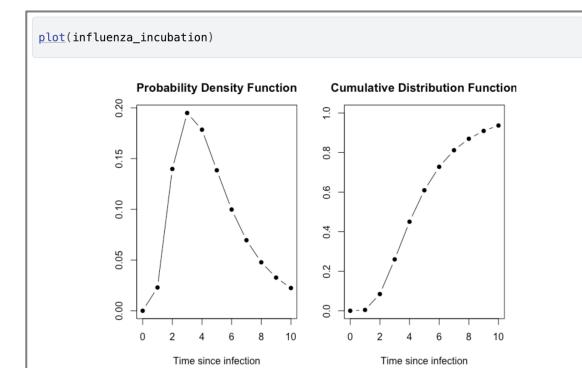

```
convert_gamma_summary_stats(mean = 2, sd = 2)
#> $shape
#> [1] 1
#>
#> $scale
#> [1] 2
```

```
extract_param(
  type = "range",
  values = c(10, 5, 15),
  distribution = "lnorm",
  samples = 25
)
```

Load parameters from library:

```
epidist_db(
  disease = "COVID-19",
  epi_dist = "incubation_period",
  author = "Bui_etal"
)
#> Using Bui et al. (2020) <10.1371/journal.pone.0243889> PMID: 33362233.
#> To retrieve the short citation use the 'get_citation' function
#> Numerical approximation used, results may be unreliable.
#> Disease: COVID-19
#> Pathogen: SARS-CoV-2
#> Epi Distribution: incubation period
#> Study: Bui et al. (2020) <10.1371/journal.pone.0243889> PMID: 33362233
#> Distribution: weibull
#> Parameters:
#>   shape: 2.217
#>   scale: 7.226
```

Plot, process and reuse parameters:

Improving the C++ Code Quality of an Rcpp Package

Ensuring & Showcasing the Statistical Correctness of your R Package

Episode 119 of the #rstats @rweekly_org Highlights podcast is out! podverse.fm/episode/bvGTUi...

- 🏗 Dev containers with R and Quarto [@jimjam_slam](#)
- 🛠 Extending data frames [@joshua_lambert](#)
- ✖️ Solar system plots with {ggsolar} [@hrbrmstr](#)

How to get involved?

- **Co-create** in wider collaborations (e.g. WHO collaboratory)
- **Suggest** contributions to existing packages (e.g. godataR)
- **Highlight** methods to include in our pipelines (e.g. episoap)
- **Showcase** your packages/tools at an upcoming event
- **Develop** new tools that are interoperable with same standards
- **Contribute** to projects hosted on our GitHub (e.g. finalsize)
